

Guide to Purchasing Crown Sports Lockers Standard Wooden Lockers

General, Delivery, Lead Times

Our lockers are genuine all wood construction manufactured in Devon, not to be confused with cheaper metal lockers fitted with wood doors.

Built to the same high quality as our bespoke lockers the given specification for our standard locker is 'entry level'; we can change the specification & configuration to suit your exact requirements at an additional cost, call us and talk with our sales team. They are trained in all aspects of our wooden lockers and will be pleased to assist.

The locker bodies are factory assembled but require the doors and locks to be fitted. The door hinge mounting plates are factory fitted and the doors are secured to these plates with a cam grip clip on hinges that requires no screws and because of our accurate machining it is unlikely any door adjustment will be necessary. This system reduces packaging and subsequent disposal cost.

Our lockers are easily installed by kitchen fitters or competent DIY when using our plinth system and accessories.

Delivery, the locker bodies are delivered by pallet so are tailgate delivery or if sufficient quantity by dedicated vehicle. The doors and any ancillary items are packed with the lockers

Lead Time, we aim to have your order ready for despatch within 10 working days after receipt of all documentation (nonstandard lockers excepted)

Finally, telephone advice is on hand to assist you at any stage

Limitations; none of our wooden lockers are suitable for pool side installations, while they will withstand levels of humidity they should not be pressure washed nor subjected to constant direct contact with water

Standard Locker Features

- Body material: 100% 18mm high density particle board with melamine face to both sides
- Body construction: CNC machined for dowel and screw assembly providing an extremely accurate and robust locker shell. Rear panel inset 25mm
- Body ventilation: 35mm diameter ventilation grille in rear panel of each locker
- Size 1800h x 450d x 300w (mm external dimensions.) + plinth 100/150mm
- Configuration single nest only; 1,2,3,3,5,6 Tier
- Hinges: Salice cast hinge plate with two way cam adjustment. Hinge arm 120 degree cam fix in door, clip to mounting plate.
- Doors: Oak wood effect melamine 18mm high density particle board. Edged all around with 1mm ABS high impact material
- Locking System. Master suited cam locks with hooked cam or latch lock to take padlock. Rugged 2mm bright finish lock keep plate secured with 4 screws.
- Suitable for contract use and passed both BS EN 16121:2013 and BS 12150-1:2000 testing requirements this range of quality wooden lockers is both smart and functional being very resilient to everyday knocks and bumps.

Which Locker Range Should I choose?

Wooden Office Lockers: (Dry Floor)

To be used in dry floor areas. They have an integral plinth so can be placed directly on to the existing floor however they do require fixing to the wall for security.

Locker bodies constructed from oak wood grain finish boards as standard with no visible fixings on the external sides thus do not require end panels.

These lockers are ideal when a small number of lockers in individual groups are required since they do not require a plinth construction or expensive locker end panels. For larger quantities see Standard Wooden Personal Locker Range.

Wooden Personal Locker. (Wet or Dry Floor)

These lockers were designed to be used in changing rooms; however they can be used universally in wet or dry floor areas such as offices. They have no integral plinth. Use our plinth system or construct a plinth using a waterproof material. Lockers require fixing to the wall for security.

Locker bodies constructed from cream coloured board with visible external fixings on external sides so decorative end panels are required to cover seen locker ends.

Standard School / Sloping Top Wooden Locker Range (Wet or dry area)

These lockers are similar to the Wooden Personal Locker Range but have a number of options such as sloping tops which are specifically relevant to educational requirements, they can be used on wet or dry floors. They have no integral plinth. Use our plinth system or construct a plinth using a waterproof material. Lockers require fixing to the wall for security.

Golf Bag Storage Lockers

Lockers to store golf bags and personal possessions. They are generally installed in dry areas with carpet or timber floors. They have no integral plinth. Use our plinth system or construct a plinth using a waterproof material. Lockers require fixing to the wall for security.

There are two configuration options in this range and they are interchangeable with each other:

- (a.) Lockers with no seats attached
- (b.) Lockers with seats attached.

Entry Level Specification and Options Available
